

Test of Markdown

This is plain text

This **bold** text *this is italic* text. I like to say that it's kind of *emphasys* or *sacarsm* text

Now let's try some emoji :+1:

This is a link: <https://docs.github.com/en/github/writing-on-github/getting-started-with-writing-and-formatting-on-github/basic-writing-and-formatting-syntax#using-emoji>

And this is the [link](#) in another way

The emoji doesn't work in my local jupyter.

Now let's try the image that proves it:

At least the image works. Now let's try to upload it into the github

It *does* work if you put the link properly and you upload also the image. I tried to use imgur or imageshack but they require to login and/or pay. So I'll stick with upload capturaXX.JPG to the repositories.

Exporting

Exporting to HTML is easy (file -> download as -> html)

Exporting to pdf is being more tricky. I have this error:

```
500 : Internal Server Error
```

The error was:

```
nbconvert failed: xelatex not found on PATH, if you have not installed
xelatex you may need to do so. Find further instructions at
https://nbconvert.readthedocs.io/en/latest/install.html#installing-
tex.
```

So I go to the page of miktex to instal xelatex, [here](#) and install something more... sigh.

And it doesn't work because miktex doesn't install xelatex so it gets the same result. I'm not going to install more outside things. So no pdf for now. If I *really* need them I'll install them later.
